Product Requirement Document (PRD)

1. Executive Summary & Problem Statement

1.1 Context & Background

University students often face difficulties finding internship opportunities because information is distributed across multiple job portals, company websites, and social media platforms. Students must spend additional time searching for relevant positions and comparing opportunities that match their academic background, skills, and career interests.

Managing internship opportunities can also be challenging. Students may forget to revisit interesting vacancies, lose track of application progress, or struggle to find useful resources for preparing their applications.

InternHub is a web application designed to help university students discover and organize internship opportunities through a centralized platform. The application provides internship listings, search and filtering features, detailed vacancy information, saved internships, application tracking, and internship preparation resources.

1.2 Problem Statement

University students need a more organized and efficient way to discover and manage internship opportunities because information is scattered across different platforms and application progress can be difficult to track.

InternHub aims to simplify the internship search process by bringing essential internship discovery and organization features into one platform.

1.3 Product Objectives

1. Help students discover internship opportunities more efficiently.
2. Allow students to narrow down vacancies using search and filtering features.
3. Help students organize interesting internship opportunities in one place.
4. Provide a centralized view of internship application records and statuses.
5. Provide accessible resources to support internship preparation.

2. Target Persona

2.1 Primary User: University Student

Name: Maya
Age: 20 years old
Occupation: Second-year university student
Primary Goal: Find an internship that matches her interests, skills, and academic background.

Core Need: Maya wants to find relevant internship opportunities without searching through multiple platforms and wants to organize her internship search more easily.

Pain Points:

- Internship vacancies are scattered across different websites and platforms.
- Finding opportunities that match her interests and qualifications takes time.
- Interesting vacancies are difficult to organize when they are saved in different places.
- Keeping track of internship applications and their progress can be confusing.
- Finding useful resources for preparing internship applications requires additional effort.

Expected Benefits:

- Discover internship opportunities in one platform.
- Find relevant vacancies using search and filters.
- Save interesting internships for later review.
- Review application records and statuses in one place.
- Access internship preparation resources more easily.

3. Context: Design & User Flow

3.1 Product Overview

InternHub is designed to support the internship search journey, from discovering vacancies to organizing applications and accessing career preparation resources.

The main pages of InternHub are:

1. Home / Branda

Provides an introduction to InternHub and helps users navigate to the main internship discovery features.

2. Field Internship

Displays internship opportunities and provides search and filtering options to help users find relevant vacancies.

3. Detail Lowongan

Displays detailed information about a selected internship, allowing users to review the opportunity before deciding on their next action.

4. Saved

Provides a centralized list of internship opportunities that users have saved for future reference.

5. Applications

Provides a view of internship application records and their statuses, helping users organize their application process.

6. Resources

Provides internship-related information and learning resources to support users during their internship preparation.

3.2 Expected User Flow

1. The user opens the InternHub homepage.
2. The user navigates to the internship listings page.
3. The user searches or applies available filters to find relevant opportunities.
4. The user opens a vacancy detail page to review the opportunity.
5. The user saves an interesting vacancy for later reference.
6. The user reviews saved opportunities and organizes application records.
7. The user accesses the Resources page when additional preparation materials are needed.

The flow describes the intended product experience. Features requiring persistent data storage, authentication, or external integrations must be evaluated separately if they are not yet implemented.

4. User Story

Primary User Story

- As a university student looking for an internship,
- I want to discover and filter internship opportunities in one platform,
- So that I can find relevant opportunities more efficiently and organize my internship search.

Supporting User Stories

1. As a student, I want to view detailed internship information so that I can evaluate whether an opportunity

matches my needs.
2. As a student, I want to save interesting internship vacancies so that I can review them later.
3. As a student, I want to review my internship application records and statuses so that I can keep track of my application progress.
4. As a student, I want to access internship preparation resources so that I can better prepare for internship applications.

5. In-Scope (MVP)

The Minimum Viable Product (MVP) includes the following proposed capabilities:

1. **Internship Listings:** Display internship vacancies with essential information.
2. **Search & Filters:** Allow users to search and filter internship opportunities using the available criteria.
3. **Internship Details:** Display detailed information about a selected vacancy.
4. **Saved Internships:** Allow users to save and review interesting internship opportunities.
5. **Application Tracking:** Display internship application records and their associated statuses.
6. **Internship Resources:** Provide access to internship-related preparation materials.
7. **Page Navigation:** Allow users to navigate between the main InternHub pages.

The implementation of each capability must be verified against the current HTML files and any available application logic.

6. Out of Scope

The following capabilities are excluded from the initial MVP unless they are explicitly added to the project requirements:

1. Automatic submission of internship applications to external companies.
2. Direct messaging between students and recruiters.
3. AI-powered personalized internship recommendations.
4. Recruiter dashboards and employer account management.
5. Real-time synchronization with external job portals.
6. Automated interview scheduling with companies.
7. Advanced analytics and personalized career prediction.

7. Functional Requirements

FR-01: Internship Listings

The system shall display a list of internship opportunities on the FieldInternship page. Each listing shall present the available vacancy information and provide access to its detail page.

FR-02: Search and Filtering

The system shall provide search and filtering controls on the internship listings page. Users shall be able to interact with these controls to find relevant internship opportunities.

FR-03: Internship Details

The system shall provide a DetailLowongan page that displays information about a selected internship. Users shall be able to access the page from the internship listings.

FR-04: Saved Internships

The system shall provide a save action for internship opportunities and a dedicated Saved page where users can review saved internships. The saving behavior shall follow the functionality implemented in the current application.

FR-05: Application Tracking

The system shall provide an Applications page that displays available internship application records and their statuses. The page shall present the information supported by the current implementation.

FR-06: Internship Resources

The system shall provide a Resources page containing internship-related preparation information and working links to the available resources.

FR-07: Navigation

The system shall provide navigation between the homepage, internship listings, internship details, saved internships, applications, and resources. Navigation links shall point to the correct existing HTML pages.

8. Acceptance Criteria

AC-01: Internship Listings

- Users can open the FieldInternship page.
- Internship listings are displayed in a readable format.
- Users can access the detail page from a listing.

AC-02: Search and Filtering

- Users can interact with the search field.
- Users can interact with the available filtering controls.
- Search and filtering can be used to find relevant internship opportunities.

AC-03: Internship Details

- Users can open the DetailLowongan page from an internship listing.
- The detail page displays the available vacancy information.

- Users can navigate between the detail page and the internship discovery experience.

AC-04: Saved Internships

- Users can interact with the save action on an internship.
- Users can open the Saved page.
- The Saved page behaves according to the saving functionality implemented in the application.

AC-05: Application Tracking

- Users can open the Applications page.
- Available application records and statuses are presented clearly.
- The displayed information reflects the current implementation.

AC-06: Internship Resources

- Users can open the Resources page.
- Available resources are presented clearly.
- Resource links can be opened successfully.

AC-07: Navigation

- Users can navigate between the main InternHub pages.
- Navigation links lead to the correct existing HTML pages.
- Links work with the actual filenames and capitalization used in the project.

9. Non-Functional Requirements

NFR-01: Usability

The interface should be understandable and easy for university students to navigate.

NFR-02: Consistency

Page layouts, navigation elements, and information presentation should remain consistent throughout the application.

NFR-03: Accessibility

HTML elements should use appropriate semantic structure, meaningful link text, and accessible labels where applicable.

NFR-04: Maintainability

The project should use clearly organized files and consistent naming conventions to make future updates easier.

NFR-05: Compatibility

The web pages should be tested in a modern web browser to verify that their content and navigation work as intended.

10. Assumptions & Dependencies

1. University students are the primary users of InternHub.
2. Internship vacancy information must be available from a defined data source or supplied content.
3. The initial product scope focuses on internship discovery and organization rather than direct recruitment management.
4. Persistent saved internships and application records may require backend services or browser-based storage, depending on the chosen implementation.
5. External application submission and synchronization are not included in the initial scope.

11. Success Criteria

11. Success Criteria

The initial InternHub MVP is considered to meet its functional objectives when:

1. Users can access the internship listings and view available vacancies.
2. Users can use the available search and filtering controls.
3. Users can open internship detail pages from the listings.
4. Users can use the save action and access the Saved page.
5. Users can access application records and their displayed statuses.
6. Users can access internship preparation resources and open the available links.
7. Users can navigate between the main application pages without incorrect page links.

The initial functional checks have been performed in a browser. Further testing may be needed to evaluate data persistence, usability, accessibility, and behavior across different browsers.

12. Future Enhancements

Potential improvements for future versions include:

1. Student registration and login.
2. Persistent user profiles and saved internship records.
3. Application status updates and notifications.
4. Personalized internship recommendations.
5. Integration with external internship platforms.
6. Additional career development and interview preparation resources.
